

An opportunistic fixed income strategy, designed to provide low correlation to core fixed income, offering current yield, low interest rate sensitivity and limited downside volatility.

FUND OVERVIEW

- The Semper Total Return Fund is a UCITS which seeks to provide a high level of risk-adjusted current income and capital appreciation
- The Fund is invested in fixed income securities similar to Semper Capital Management's existing U.S. domiciled MBS Total Return Strategy
- Investments are concentrated in U.S. Mortgage-Backed Securities (MBS) including Non-Agency and Agency MBS and related structured credit sectors including Commercial Mortgage-Backed Securities (CMBS) and Asset-Backed Securities (ABS)

FUND PERFORMANCE & RECAP

- The U.S. Dollar SEMTIUU share class returned +1.75% in August, as Non-Agency (RMBS) bonds continued to recapture a portion of the 2022 first half spread widening, leading to sharp outperformance relative to the overall bond market
- Interest rates rose sharply in August, more than reversing July's rally, in response to the late July 75 bps Fed rate hike, continued inflation pressures, and the Fed's aggressive public statements about the restrictive path for monetary policy. The 2-year Treasury yield rose 60 bps to 3.50%, and the 10-year Treasury yield rose by 45 bps to 3.10%. The yield curve inverted further
- The Bloomberg MBS Index fell -3.42%, adding to a string of sharp market moves. Despite shorter duration than the Aggregate Index, the MBS Index underperformed by 60 bps, the result of the sector's volatility driven spread widening.
- The fund's 77% allocation to floating rate RMBS including Agency CRT performed most strongly, returning 1% - 3%. Most fixed rate RMBS declined in price, but less than Treasuries and corporates as spreads narrowed

OUTLOOK

- Supply will continue to decline versus early 2022's record levels, from lower mortgage originations, although we are seeing a post-Labor Day spike currently, and combined with stable bond mutual fund flows, we expect market technicals to increasingly support stronger valuations
- We continue to focus on owning seasoned bonds that benefit most acutely from the historically strong HPA over the last 2+ years and that have delevered due to the rapid prepayments that occurred over that period. The credit quality of the structures and the loans have and continue to improve in tandem. While we now expect home prices to show some weakness, current levels of credit enhancement and home equity levels will buttress valuations
- The fund's yield to maturity rose again to over 7 ¾% from rising rates and floating rate coupons resetting higher. Average portfolio coupon increased to over 6%. The 1 September quarterly dividend is approximately 6% annualized, reflecting this higher yield. We expect yield to rise again later this month following the Fed's September meeting. Current market expectations point to another 75 bp increase, which would lead to an approximate 50 bp increase in portfolio yield
